

Company Overview

Protection from the ground up.

Who Is Ground Nurse?

Ground Nurse is an Australian, family-owned ground protection specialist. We supply and deliver the products that keep machines moving, sites safe and projects on schedule — whatever the ground conditions.

We work with project managers, site supervisors and crews across construction, civil works, crane and heavy lift, mining, landscaping and government sectors. The challenge is almost always the same: unstable, wet or sensitive ground that creates risk and slows everything down. That's what we're here to fix.

With over 25 years of experience and a full range of heavy-duty products, we match the right solution to your job, fast.

We hold stock, we respond within 60 minutes during business hours, and we get it to you when you need it.

About this booklet

This is a practical overview of the industries we work in and the kinds of problems we solve every day. It's a starting point, not a full catalogue. If something looks relevant to your next project, give us a call and we'll work out the right solution together.

Call 1300 229 300 or visit groundnurse.com.au

This is how we work.

1

Call or email during business hours and you'll hear from us within 60 minutes.

2

Stock levels, lead times, pricing – we tell you upfront so you can plan around it.

3

Can't source it? Need something custom? We'll track it down or work with you to find a solution that fits.

4

We prioritise recycled and recyclable materials, with most products recyclable at end of life.

5

If something goes wrong, we don't pass you off. We fix it.

Wherever the job takes you.

Protection from the ground up.

Others Sell You A Product.

We Solve The Problem.

Stabilise Ground

Reduce Hazards

**Control Mud
& Sediment**

**Keep Machinery
Moving**

Deploy Fast

“

Ground protection is not just about covering the surface. It's about keeping machinery moving, crews working and projects on track.

”

— Ground Nurse Project Support

We've got you covered.

Ground Mats

Keep machines moving and ground conditions from slowing your job down, whatever the surface or load.

Workshop

Keep surfaces protected, machinery maintained and damage-free, ready for your next job.

Crane Products

Protect surfaces and give your lift crew the stable, compliant base they need before the job begins.

Construction

Stop mud, protect finished surfaces and keep teams moving safely through every stage of the build.

Ramps & Access

Durable ramps and covers that bridge uneven terrain, protect cables and keep people and plant moving safely across your site.

Environmental & Agriculture

Geofabric, stabilising grids and spill berms that minimise site impact and keep you on the right side of environmental compliance.

We work where you work.

From construction sites to crane lifts, civil works to mining — if ground conditions are a problem, we've solved it.

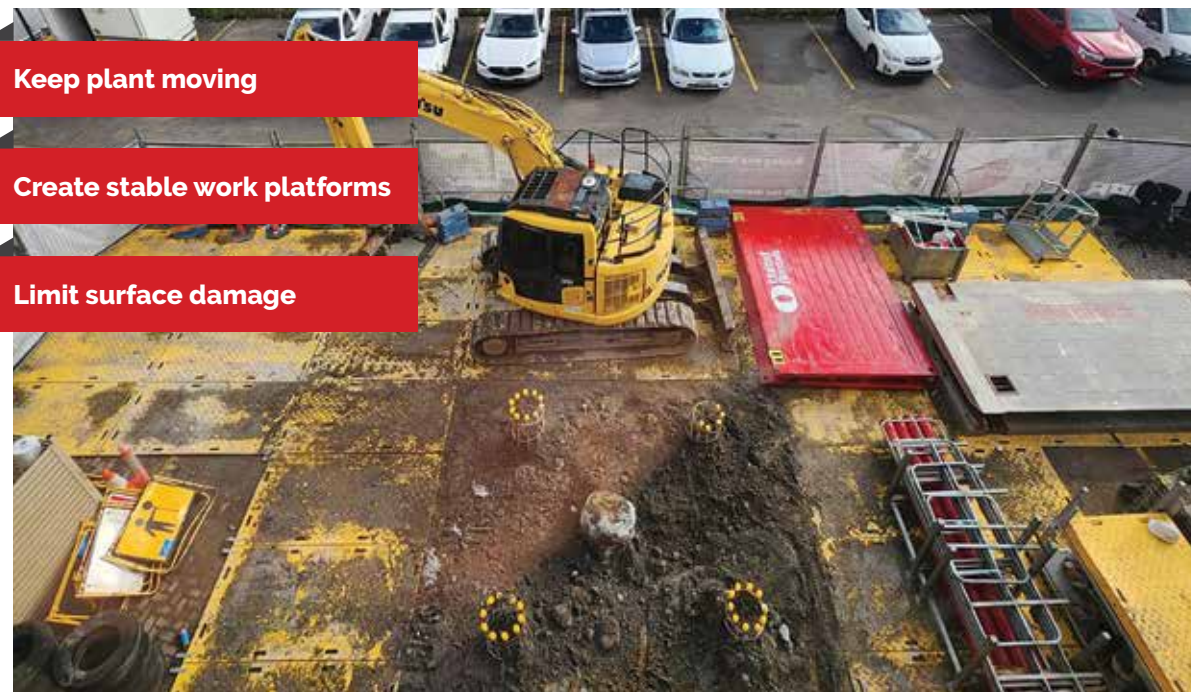

Civil & Infrastructure	10

Hire & Rental Partners	30
Industrial Maintenance & Workshops	32

Civil & Infrastructure

Civil projects move fast, and ground conditions can change overnight. Ground Nurse helps contractors, councils and utility crews create safer access, protect finished surfaces, manage trenches and keep plant moving across road, rail, drainage, water, sewer and subdivision works. We help you choose the right ground protection, access and site safety products so your crews spend less time solving ground problems and more time completing the job.

Typical Applications

- **Access & Work Platforms:** Temporary access roads and working platforms for excavators, trucks, drilling rigs, piling rigs, cranes and heavy plant
- **Trench Crossings:** Trench, pit and excavation crossings for pedestrians and light vehicles
- **Utility Upgrades:** Ground protection around drainage, sewer, water and utility upgrades
- **Kerb & Verge Protection:** Kerb, driveway and verge protection during subdivision and civil works
- **Trackout Management:** Trackout control, site entry management and sensitive surface protection

Common machinery supported

- | | | |
|----------------|-------------------|------------------|
| • Excavators | • Service utes | • Cranes |
| • Skid steers | • Vacuum trucks | • Concrete Pumps |
| • vGrader | • Concrete trucks | |
| • Telehandlers | • Trenchers | |
| • Dump trucks | • Boring rigs | |

Top Products Used

- **Ground Mats HD / Heavy Armour / Extreme Armour:** stable access for machinery working across soft, wet or uneven ground.
- **Trench Covers, Road Bridges and Road Plates:** safer crossings over trenches, pits and excavations.
- **Kerb Ramps, Kerb Guards and Trackout Mats:** cleaner entries, protected kerbs and easier site access.

Client Case Study | Wastewater Infrastructure

Still in place 18 months later

Pinned ground protection mats were installed across open grassland on a controlled infrastructure site to create a defined route for fully loaded waste trucks.

When Ground Nurse revisited the site approximately 18 months later, the mats were still in position - supported by guide posts and speed-zone signage as part of the managed access route.

At a glance

Sector Civil & Infrastructure	Solution Pinned ground protection mat roadway
Challenge Loaded waste trucks crossing open grassland	Outcome Managed access route still in position 18 months later

WASTEWATER WORKS

LOADED TRUCK ACCESS

OPEN GRASSLAND

PINNED MAT ROADWAY

CONTROLLED SITE ACCESS

LONG-TERM PERFORMANCE

Truck access route
Pinned mats created a defined route for loaded waste truck movements across grassed land.

Compound areas
Mats were underlaid with geofabric & polyethylene sheeting for maximum environmental protection.

18 months later
Mats remained in position, with guide posts and speed-zone signage added to manage vehicle movement.

From temporary access to managed truck route.

01 Challenge

Loaded trucks, sensitive ground

During a major wastewater tunnel rehabilitation program, the site team needed to move fully loaded waste trucks from the work area across open grassland.

The access route crossed controlled land, so unmanaged truck movement was not an option. Repeated heavy vehicle movements risked rutting, bogging and damage to the grassed surface.

The site needed an access solution that could hold position, define the route and support ongoing truck movements without the work area spreading across the grassland.

02 Solution

Pinned mats, controlled route

Ground Nurse supplied ground protection mats installed as a pinned access roadway across the grassed area.

The mats were anchored to help hold the route in place under repeated truck movement and create a clear access corridor for loaded waste trucks and site vehicles.

This helped concentrate traffic onto the mat roadway rather than allowing new tracks to form across the grassland.

03 Straight from site

Still in position after 18 months
When Ground Nurse revisited the site approximately 18 months later, the mats were still in place.

Guide posts added
The route had been formalised with guide posts to keep vehicles on the mat roadway.

Speed signage installed
Speed-zone signage had been added to help manage vehicle movement across the access route.

Trusted for loaded truck access
The mat roadway continued to provide a defined route for loaded waste trucks and site traffic.

04 Outcome on the ground

- ✔ Stable truck access over open grassland
- ✔ Pinned mat roadway held in position
- ✔ Defined route for fully loaded waste vehicles
- ✔ Reduced risk of rutting and uncontrolled traffic paths
- ✔ Guide posts and speed-zone signage added
- ✔ Still in position approximately 18 months later

The result

A pinned ground protection solution that turned open grassland into a managed truck access route - supporting loaded waste vehicle movements, helping protect the site surface and remaining in place approximately 18 months after installation

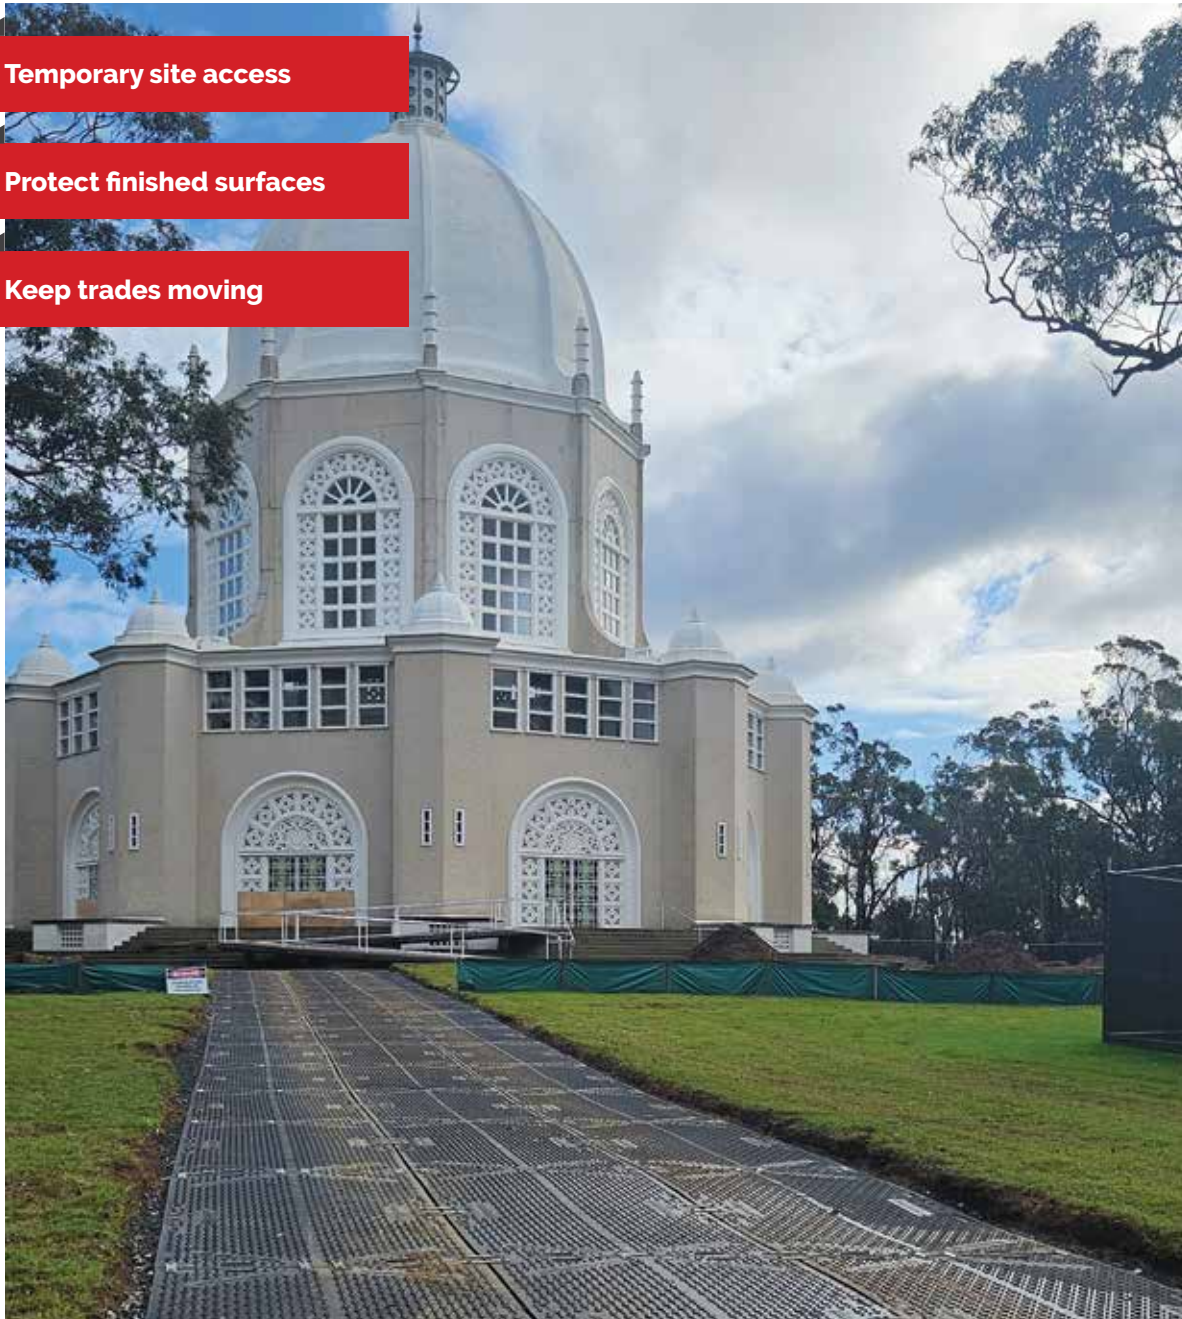

Construction & Building

Construction sites are under constant pressure, with tight access, changing ground, multiple trades and deadlines that do not move. Ground Nurse supports builders, site managers and subcontractors with ground protection, temporary access, walkways, ramps and surface protection that make sites safer, cleaner and easier to work on from start to finish.

Temporary site access

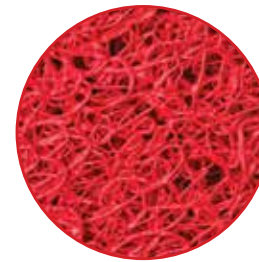

Protect finished surfaces

Keep trades moving

“ Tight access, finished surfaces and multiple trades are where construction sites get messy. We help create the temporary access and protection that keeps the job moving. ”

— Ground Nurse Construction Insight

Typical Applications

- **Vehicle Access:** Site access for utes, telehandlers, forklifts, EWP's and delivery trucks
- **Finished Surface Protection:** Lawn, driveway, pavement and finished surface protection
- **Pedestrian Access:** Pedestrian walkways and temporary access paths
- **Service Protection:** Cable and hose protection across active work zones
- **Site Set-Up Areas:** Skip bin, container and materials handling areas

Top Products Used

- **Ground Mats Lite / Ground Mats HD:** fast, reusable ground protection for trades, machinery and delivery access.
- **Site Matting, Walkways and Cable Covers:** safer movement for people, tools, hoses and temporary services.
- **Kerb Ramps, Pipe Supports and Roll-Off Container Pads:** reduce damage during deliveries, skip movements and site set-up.

Mining, Energy & Resources

Mining, energy and resources projects need equipment that can handle load, distance, weather and harsh working environments. Ground Nurse supports project teams with heavy-duty ground protection, access systems, equipment support and workshop protection that help maintain uptime, reduce damage and keep crews moving safely across remote and demanding sites.

Heavy-duty load support

All-weather site access

Rapid deployment & recovery

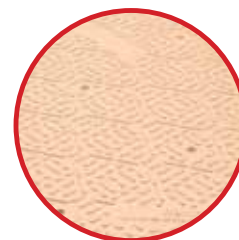

Common machinery supported

- Drill rigs
- Cranes
- Frannas
- Telehandlers
- Loaders
- Excavators
- Dozers
- Graders
- Service trucks
- EWP's
- Pipe handling equipment
- Tracked maintenance plant
- Allshelter® Shelter flooring

Typical Applications

- **Rig & Plant Access:** Access roads and work pads for drill rigs, cranes, loaders and service trucks
- **Temporary Site Support:** Temporary support for site compounds, equipment, pipe and infrastructure
- **Hardstand Protection:** Workshop and hardstand protection from tracked machinery
- **Linear Infrastructure Access:** Pipeline, transmission, renewable energy and shutdown project access
- **Remote Ground Protection:** Ground protection in wet, remote or environmentally sensitive areas

Top Products Used

- **Extreme Armour / Heavy Armour / Bog Mats:** heavy-duty access for large plant, soft ground and demanding project conditions.
- **Dunnage, Pipe Supports and Ground Blocks:** stable support for pipe, equipment, temporary structures and heavy components.
- **Workshop Pads, Rubber Lock Tiles and Track Pads:** protect concrete floors, shelters and hardstands from steel tracks and heavy equipment.

Client Case Study | Mineral Sands

Stable ground where the work keeps moving.

Reusable ground protection mats deployed across an active mineral sands project — supporting drilling, commissioning and field infrastructure across loose, sandy and muddy terrain, then adopted for uses well beyond the original brief.

At a glance

Sector
Mineral sands project

Solution
Reusable ground protection mats

Challenge
Loose, sandy & muddy ground slowing access

Outcome
Flexible, relocatable site asset

DRILLING SUPPORT

COMMISSIONING

SITE ACCESS

TEMPORARY INFRASTRUCTURE

FAST PLACEMENT

REUSABLE

Active work zone

Mats deployed beside equipment and temporary modules over muddy ground.

Field infrastructure

Defined access around cables, trays and commissioning equipment.

From drilling support to everyday site use.

01 Challenge

Changing ground, constant movement

Active mineral sands projects move crews and equipment through shifting site conditions. Loose sand, mud, repeated foot traffic and field infrastructure quickly create ground issues that slow work, complicate access and drive up temporary surface repairs.

The site needed protection that deployed fast, worked in many locations and relocated as work fronts changed — without heavy installation effort.

02 Solution

One mat, many work fronts

Ground Nurse supplied reusable mats placed around drilling, commissioning and temporary infrastructure to create stable surfaces over sandy and muddy ground.

As work progressed, crews adopted the mats well beyond the original brief — outside temporary commissioning offices and across field infrastructure — proving their value as a flexible site asset rather than a single-purpose product.

Additional Site Use Identified

The client also identified a potential use for the mats as a protective separator between temporary power cables and field pipework, subject to site engineering, electrical and safety approval.

03 Straight from site

Popping up all over the site

Used across multiple locations, not just the initial work area.

Used outside commissioning offices

Commissioning and temporary infrastructure became everyday applications.

Stayed put once placed

Held position even where not every mat was bolted — enabling fast placement and relocation.

Potential cable / piping separator

Where trailing power cables cross field piping — subject to site engineering, electrical & safety requirements.

04 Outcome on the ground

- ✔ More stable work areas across sandy and muddy ground.
- ✔ Reusable mats placed wherever the work demanded.
- ✔ Added potential: separating field piping and power cables.
- ✔ Practical support for drilling, commissioning and office access.
- ✔ Reduced unnecessary ground preparation in suitable areas.
- ✔ An asset that flexed as the project evolved.

The result

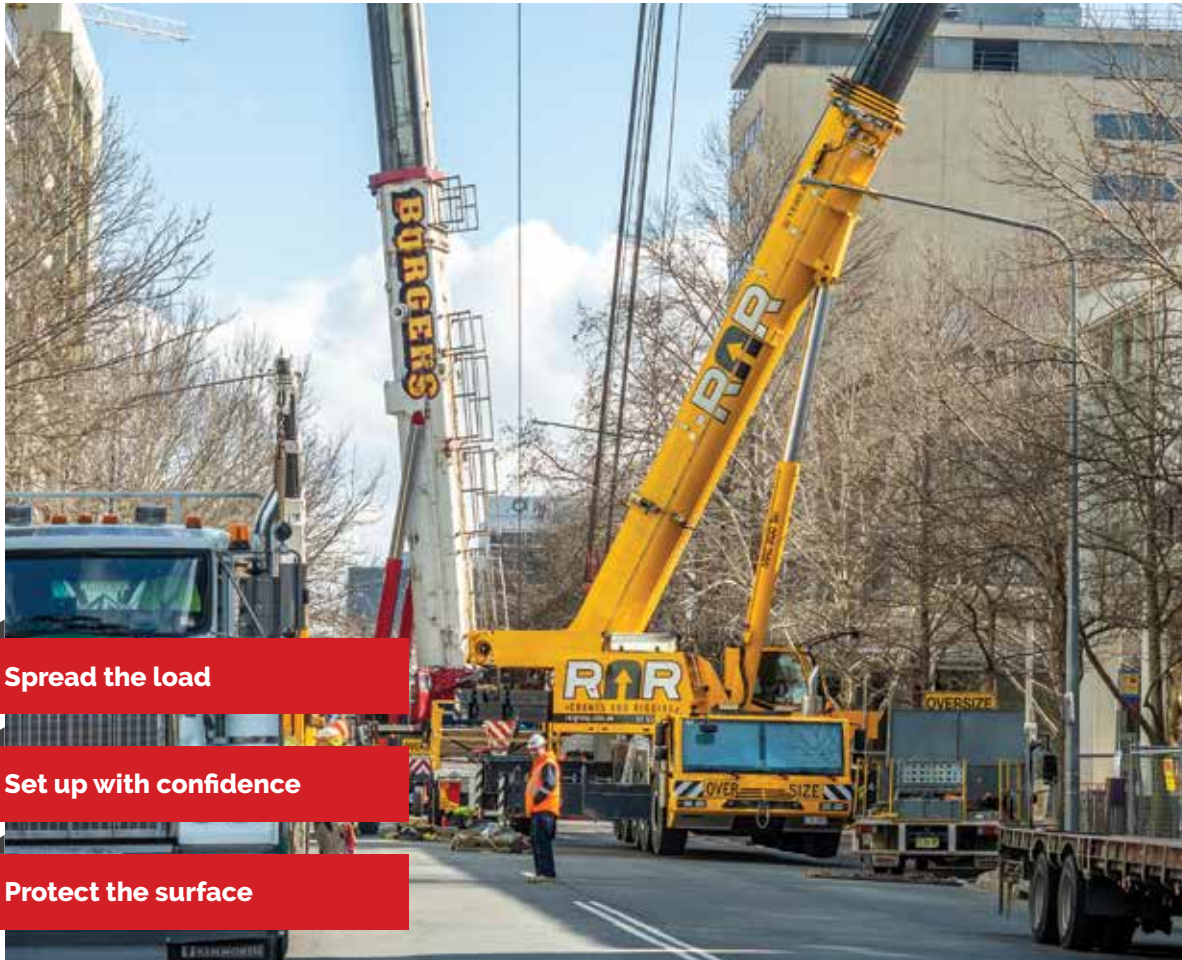

A flexible ground protection solution that helped the team manage changing site access, support temporary infrastructure and keep field work moving with less ground-related friction.

Note: Any cable-separation application remains subject to site-specific engineering, electrical and safety requirements.

Crane & Heavy Lift

Heavy lifts rely on preparation. Ground Nurse helps crane companies, lift planners and project teams create safer, more stable working areas with crane pads, outrigger systems, access mats and handling solutions suited to the lift, the machine and the ground conditions. The goal is simple: reduce risk, protect the site and give crews confidence before the lift begins.

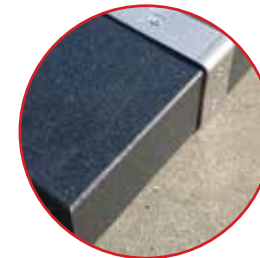

Spread the load

Set up with confidence

Protect the surface

Typical Applications

- **Outrigger Pads:** Support for cranes, pump trucks and elevated work platforms
- **Crane Set-Up Areas:** Access and positioning areas for Frannas, mobile cranes and crane trucks
- **Multi-Surface Lifts:** Support for lifts on grass, asphalt, concrete, gravel or uneven ground
- **Sloped Set-Ups:** Incline support for challenging or uneven set-up locations
- **Custom Pad Solutions:** Pads tailored to unusual foot sizes, load requirements or site conditions

Top Products Used

- **Outrigger Pads, Stack Pads and Custom Pads:** load support for cranes, pump trucks and access equipment.
- **ALIMATS Outrigger System:** engineered modular load spread for demanding heavy lift applications.
- **Ground Mats HD / Heavy Armour / Extreme Armour:** temporary access and set-up pads for crane movement and positioning.

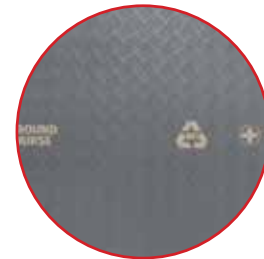

Government & Defence

Government and Defence projects demand reliable supply, clear information and products that support safe, controlled site operations. Ground Nurse helps procurement teams, contractors and facilities managers protect assets, create temporary access, manage public safety and respond quickly across metro, regional and remote projects.

Rapid deployment

Stable site access

Robust protection

Typical Applications

- **Emergency Access:** Temporary access for maintenance, emergency works and facility upgrades
- **Asset Protection:** Protection of roads, pavements, training areas, parks and public spaces
- **Equipment Load Support:** Temporary support for vehicles, containers, shelters, generators and field equipment
- **Operational Site Support:** Defence base, depot, airfield and logistics area support
- **Remote Aviation Support:** Ground stabilisation for temporary airfield, helipad, staging and support zones

Top Products Used

- **Ground Mats Lite / HD / Heavy Armour / Extreme Armour:** protect sensitive assets while maintaining vehicle and machinery access.
- **Custom Dunnage & Load Support Pads:** tailored support for vehicles, containers, shelters, generators and temporary field infrastructure
- **MatStor Stillages and Bundles:** easier storage, transport and deployment for repeat-use programs.

Landscaping, Arboriculture & Turf

Working on lawns, tree zones, parks and finished landscapes takes care. Ground Nurse helps landscapers, arborists, councils and turf managers access sensitive areas without leaving the site worse than they found it. Our products help protect grass, roots, soil structure, irrigation and finished surfaces while keeping machinery productive.

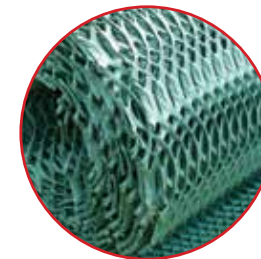

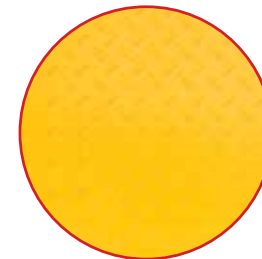

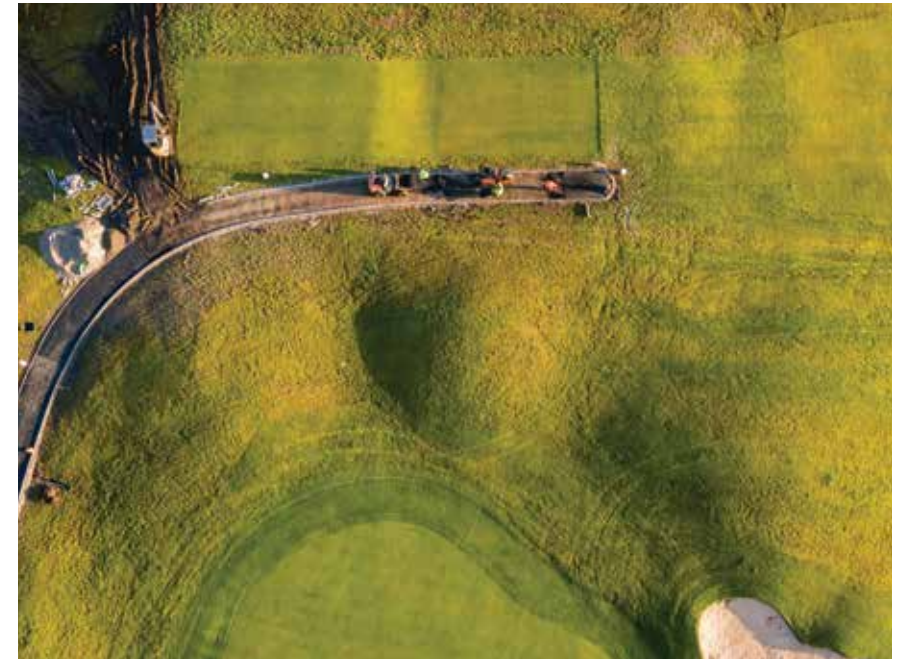

Protect root zones

Prevent turf damage

Keep machinery moving

Typical Applications

- **Tree Protection Zones:** Protect root-sensitive areas during works
- **Turf Access:** Temporary access across turf, fairways, parks and sports fields
- **Machinery Access:** Support access for mini excavators, skid steers, chippers, stump grinders and EWP's
- **Landscape Pathways:** Temporary paths through gardens, lawns and landscaped areas
- **Wet Area Stabilisation:** Ground support for wet, soft or high-traffic areas

Top Products Used

- **Track Mats / Ground Mats Lite / Ground Mats HD:** protect turf, lawns and tree zones while allowing machinery access.
- **Grass Stabilisation Mesh / GN Hex Grid:** longer-term stabilisation for grassed access and overflow areas.
- **Site Mat Drain and Walkway Matting:** safer foot traffic and drainage-friendly temporary pathways.

Events & Temporary Infrastructure

Events need fast set-up, safe movement and clean pack-down. Ground Nurse supports event organisers, councils, contractors and venue teams with temporary roadways, pedestrian access, cable protection and surface protection that help move people, vehicles and infrastructure without damaging the site.

Fast bump-in access

Safe public movement

Protect venue surfaces

Typical Applications

- **Bump-In Access:** Temporary access for trucks, forklifts, telehandlers and service vehicles
- **Public Walkways:** Pedestrian walkways, queue areas and temporary paths
- **Cable Protection:** Cable and hose protection across public access areas
- **Surface Protection:** Turf, parkland, oval and venue surface protection
- **Event Infrastructure:** Support for staging, toilets, fencing and temporary compound areas

Top Products Used

- **Site Mat / Ground Mats Lite / Ground Mats HD:** temporary access and surface protection for vehicles and pedestrians.
- **Cable Covers and Portable Cable Covers:** protect power, water and communication lines while reducing trip risks.
- **Pedestrian Kerb Ramps and Walkway Matting:** safer access for crowds, trolleys, wheelchairs and event crews.

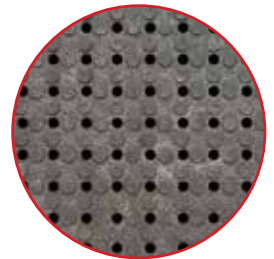

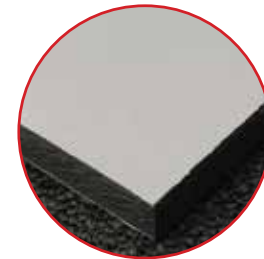

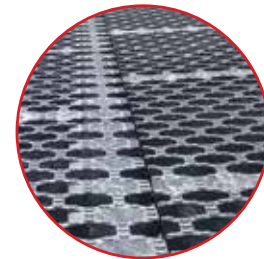

Agriculture, Rural & Equestrian

Rural sites need practical products that handle mud, moisture, livestock, machinery and repeated use. Ground Nurse supports farms, equestrian facilities, rural contractors and property managers with ground protection, stable surfaces, drainage support and durable recycled plastic products that reduce maintenance and make everyday work easier.

Protect soft ground

Improve animal footing

Tough stable protection

Typical Applications

- **Hoof Damage Control:** Protect soft ground in yards, gateways, laneways and high-use animal areas
- **Mud & Wet Area Support:** Stabilise boggy ground around shelters, troughs, wash bays and stables
- **Safer Stable Surfaces:** Improve footing where wet concrete or hardstand areas create slip risk
- **Impact-Resistant Walling:** Durable stable wall material for sheds, stables and animal handling areas
- **Event & Float Areas:** Temporary ground protection for equestrian events, float parking and arena surrounds

Top Products Used

- **Stable Grids / TerraGrid / Grass Stabilisation Mesh:** stabilise wet, high-use access areas while supporting drainage.
- **Stableboard and Ground Nurse Sheeting:** durable, easy-clean walling and lining for animal environments.
- **Ground Mats Lite / HD and Site Mat Drain:** temporary access for vehicles, machinery and animal-care zones.

Hire & Rental Partners

Hire businesses need products that are easy to explain, easy to move, hard-wearing and ready to earn again on the next job. Ground Nurse supports hire and rental partners with reusable ground protection, ramps, cable covers and handling systems that help customers solve site problems quickly while keeping your fleet organised and protected.

Support more customers

Easy to handle

Built for repeat use

Typical Applications

- **Fleet Supply Support:** Ground protection products supplied to hire businesses servicing builders, councils, events, landscapers and civil contractors
- **High-Demand Support Gear:** Crane pads, outrigger pads and EWP support products for rental fleets
- **Access & Safety Products:** Cable covers, ramps and temporary access products for worksite and event customers
- **Easy Transport & Storage:** Stillage-based mat handling for faster loading, returns and yard organisation
- **Customer Problem Solving:** Products that help rental partners respond to urgent access, ground protection and site safety requests

Top Products Used

- **Ground Mat Bundles with MatStor Stillages:** efficient fleet storage, transport and repeat deployment.
- **Outrigger Pads and Stack Pads:** simple, high-demand hire items for cranes, EWPs and pump trucks.
- **Trackout Control Mats & Rumble Grids:** manage tyre debris and track-out on construction, civil and industrial sites.

Industrial Maintenance & Workshops

Workshops and maintenance sites need to protect floors, support heavy equipment and keep crews safe around machinery. Ground Nurse helps industrial, transport, mining and equipment maintenance teams reduce surface damage, improve work areas and support heavy plant with practical floor protection, cribbing, pads and modular workshop systems.

Protect concrete floors

Support heavy equipment

Protect display areas

Typical Applications

- **Concrete Floor Protection:** Protect floors from steel tracks, buckets, blades and heavy tyre loads
- **Service & Shutdown Support:** Support equipment during servicing, maintenance and shutdown works
- **Defined Work Zones:** Create walkways, work areas and safer workshop movement routes
- **Plant & Attachment Support:** Stabilise forklifts, scissor lifts, mobile plant and heavy attachments
- **Display Area Protection:** Protect showrooms, shelters, hardstands and customer-facing equipment areas

Top Products Used

- **Dozer Pads, Track Pads, Blade Rests and Ripper Pad Rests:** protect floors from tracked machinery and heavy attachments.
- **Ground Blocks, Cribbing Blocks and Step Blocks:** stable support for lifting, levelling and maintenance work.
- **Rubber Lock Tiles, Ground Lock Tiles and Work Mats LD:** durable modular floor protection for workshops, shelters and industrial spaces.

“

When ground conditions stop the job, response time matters. We combine fast advice, available stock and national supply coverage to help keep projects moving.
